

Unlocking  
the **Power** of  
Fluid Biomarkers

# The potential of protein biomarkers

Fluid-based protein biomarkers hold great promise in the development of non-invasive assays for early detection of disease and therapeutic monitoring. However, detecting low abundance biomarkers in complex solutions such as plasma is challenging and signifies the need for both ultra-high sensitivity detection as well as the ability to measure proteins across a broad dynamic range.

Alamar Biosciences

# Turning biofluids into liquid gold

Alamar's mission is to enable early detection of disease with automated, high-sensitivity protein analysis across a range of multiplex levels that supports the translation of important biomarkers from discovery to the clinic.

- **Unparalleled, low fg/mL sensitivity** enables the measurement of critical low abundance biomarkers within complex matrices such as serum and CSF
- **Flexibility** to assay single markers or multiplexed panels of 10's to 1,000's of proteins spanning up to 12 logs dynamic range using the same robust chemistry and automated system
- **High reproducibility**, with less than 10% CV, ensures consistent results across experiments and assays
- **Fully-automated system**, with less than 30 minutes hands-on time, allows for easy implementation across a variety of lab types

NULISA™ Platform

# Experience the new gold standard in protein detection

## Highly specific

with four elements of specificity built into every assay

## Unparalleled sensitivity

to detect critical biomarkers at low to sub fg/mL levels

## Broad dynamic range

enables measurement across ~12 logs without sample dilution

## Highly reproducible

with less than 10% intra- and inter-plate CV

|           | Intra-plate | Inter-plate |
|-----------|-------------|-------------|
| mean CV   | 7.3%        | 7.9%        |
| median CV | 6.2%        | 6.2%        |

# Increasing sensitivity by removing background noise

NULISA redefines the immunoassay with unique dual capture and release workflow

ARGO™ HT System

# Proteomics at the push of a button

A fully automated, high-throughput platform, the ARGO HT System facilitates the analysis of large cohorts or clinical studies with industry leading simplicity and reproducibility. An all-in-one instrument with integrated qPCR system takes you from sample to data or to pooled NGS library in one day.

- **Fully automated workflow** with <30 minutes total hands-on time
- **High-throughput capacity** with flexibility to process up to three 96-well plates per run batch
- **Rapid results** in <8 hours for single-plex qPCR assays and <16 hours for multiplex NGS panels
- **Lyophilized reagents** for easy storage and longer stability
- **Integrated software and data analysis** transforms data into biological insights and publication-ready results

# Fully automated workflow with the ARGO™ HT System

## 1 CREATE

Design run  
and queue  
for ARGO HT

< 10 minutes

## 2 LOAD

Prep sample plate  
and load instrument

< 10 minutes  
hands-on time

## 3 RUN

Sample to qPCR  
results or pooled  
NGS library

< 8 hours

## 4 NGS

Pooled library  
to FASTQ\*

~ 8 hours

## 5 ANALYZE

Integrated  
analytics

\*Sequencing step only  
required for multiplex results.

# Discover biomarkers of disease progression and therapeutic response

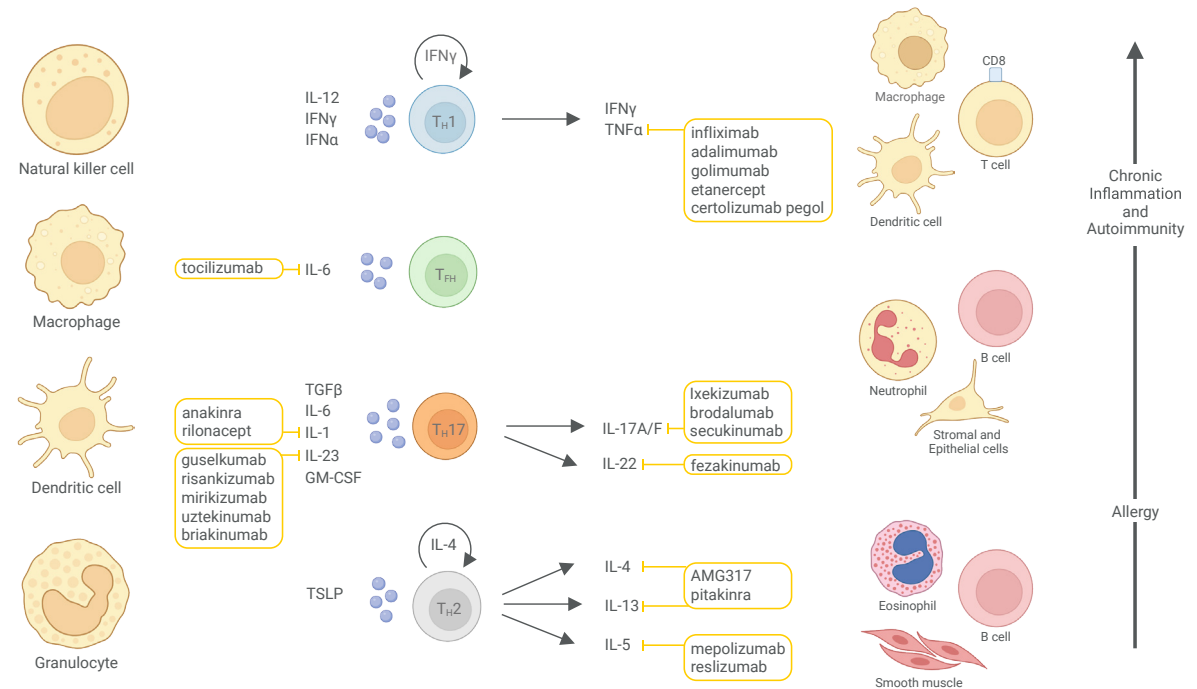

Inflammation and dysregulation of the immune response are at the root of most human diseases

Addison's Disease  
Allergy  
Asthma  
Cancer  
Cardiovascular  
Celiac Disease  
Crohn's Disease  
Grave's Disease  
Infectious Disease  
Lupus

Multiple Sclerosis  
Myasthenia Gravis  
Neuro-degeneration  
Psoriasis  
Rheumatoid Arthritis  
Sjogren's Syndrome  
Type 1 Diabetes  
Ulcerative Colitis

Cytokines are key modulators of inflammation and the target of many therapeutics

NULISaseq™ Inflammation Panel 250

# The power of deep profiling of immune function

Broadest coverage of cytokines and chemokines with the  
highest sensitivity to detect important low abundance biomarkers

- Assay **~250 proteins** from as little as 10 $\mu$ L
- **Attomolar sensitivity** to measure proteins at low fg/mL levels
- Up to **12 logs dynamic range** without the need to dilute samples
- **Highly reproducible** with <10% intra- and inter-plate CV

NULISaseq™ CNS Disease Panel 120

# Earlier detection and discrimination of disease subtypes

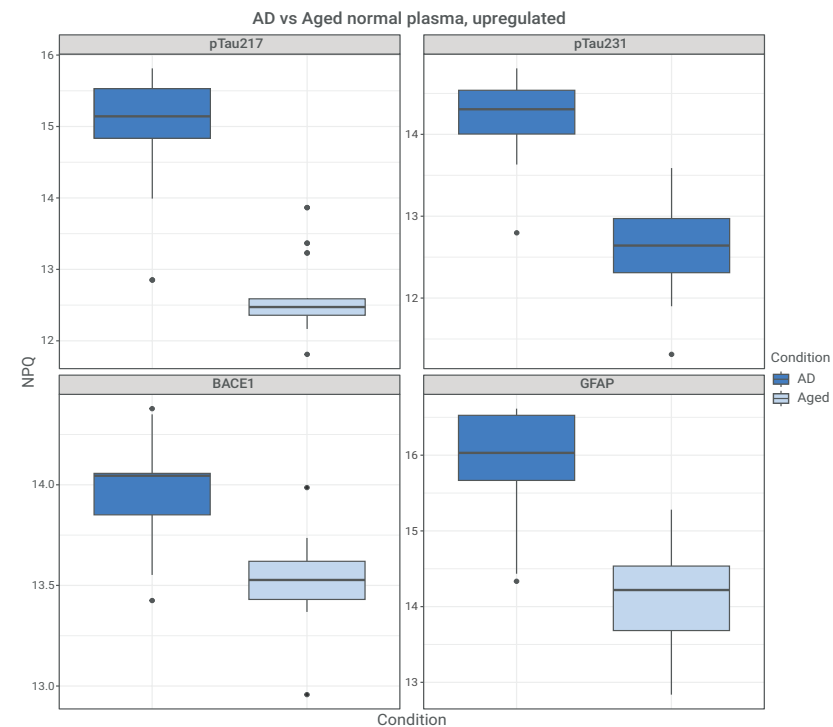

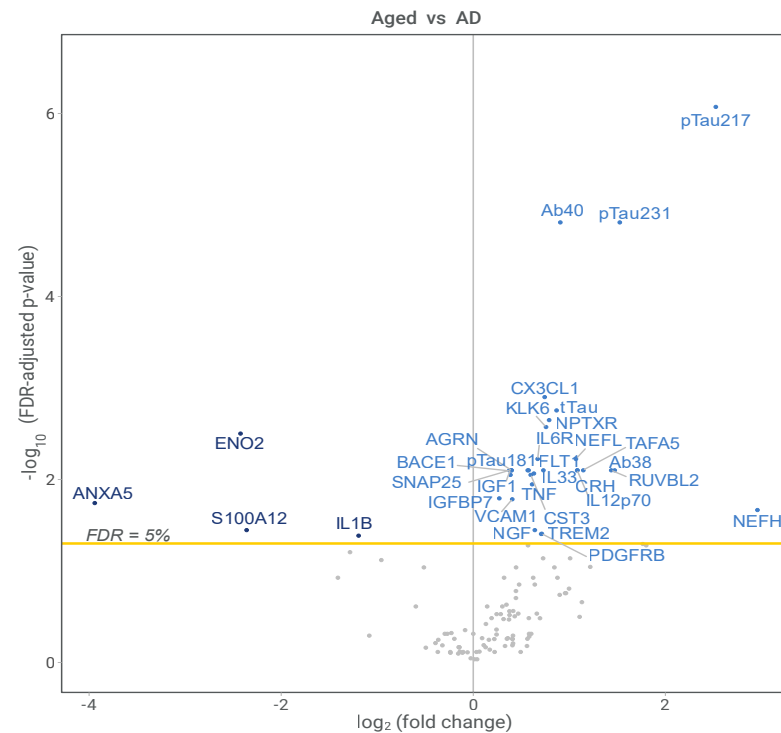

**Comprehensive panel designed by experts to cover major hallmarks of CNS disease**

- Measure ~120 proteins from as little as 10uL sample
- Detect key low abundance biomarkers such as pTau-217 with attomolar (fg/mL) sensitivity
- Measure changes in key biological processes underlying CNS disease including: synaptic and neuronal network defects, pathogenic protein aggregation, aberrant proteostasis, neuronal cell death, altered energy homeostasis, and inflammation
- Analyze data across large cohorts and multiple labs with high reproducibility (<10% inter-plate CV)

# The power to profile CNS biomarkers at the lowest limit of detection

Detect critical biomarkers of Alzheimer's Disease at the lowest limit of detection

NULISAqpcr Single-Plex Assays

# Ultra-high sensitivity measurement of your most informative biomarkers

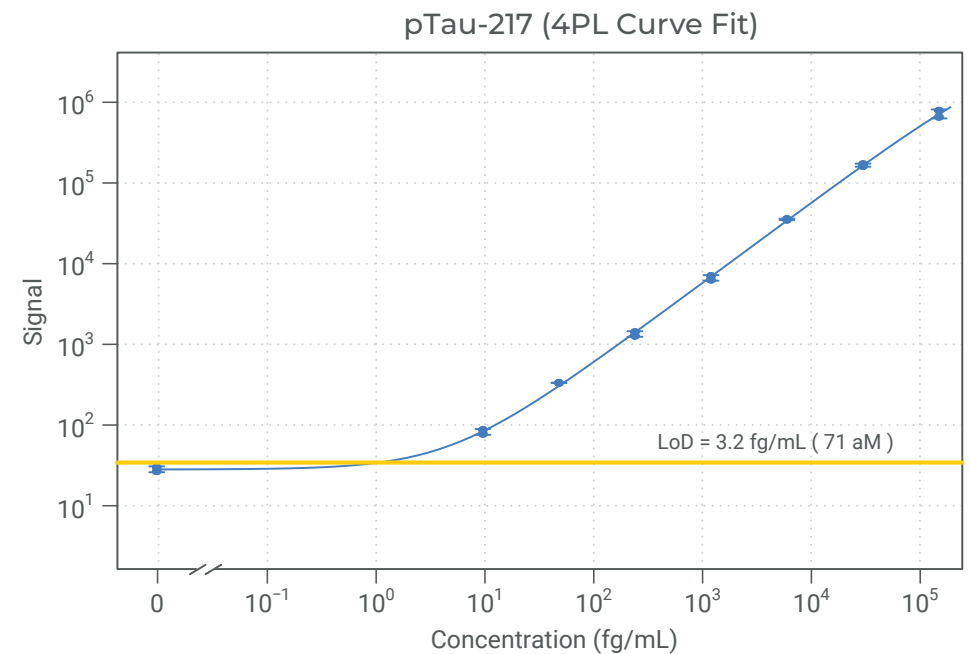

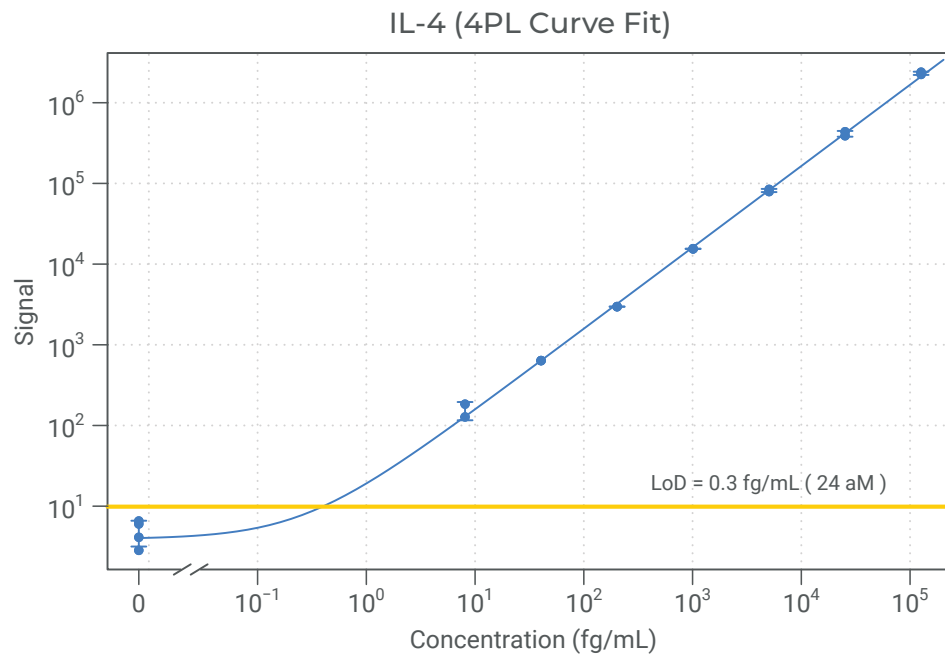

## Inventoried

GFAP  
IL-1B  
IL-4  
NfL  
pTau-217

## Made-to-order

|       |          |          |
|-------|----------|----------|
| Aβ40  | IL-6     | IL-17F   |
| Aβ42  | IL-8     | LIF      |
| CCL26 | IL-10    | pTau-181 |
| IFNg  | IL-12p70 | TDP43    |
| IFNL1 | IL-13    | TNFα     |
| IL-2  | IL-17A/F | tTau     |
| IL-5  | IL-17C   | UCHL1    |

# Detect important low abundance proteins with attomolar sensitivity (low fg/mL)

# Streamline time to result with integrated analysis

## ARGO Command Center

- Quickly set up experiments and manage sample annotations
- Manage runs and remotely monitor run status
- Ensure data security and confidentiality with group management permissions
- Automatic QC and analysis of single-plex results

## NULISA Analysis Software

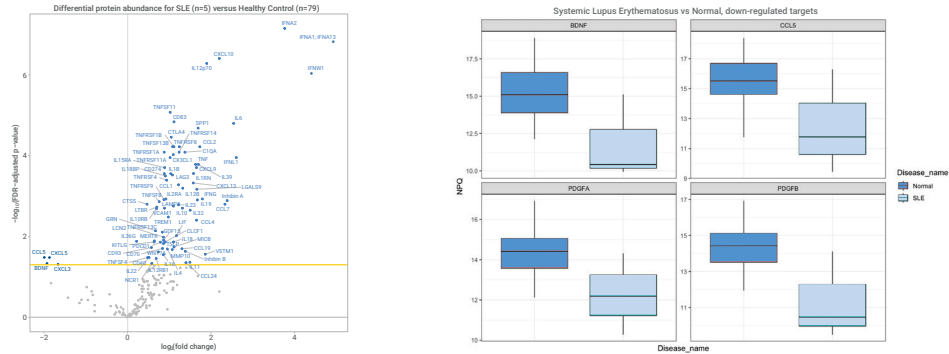

- Perform QC and data normalization for multiplex panels
- Combine data from multiple runs into a single analysis
- Advanced statistical tools for the discovery of novel biological insights
- Generation of publication-ready figures

# Quickly generate biological insights and publication-ready figures

View patterns and signatures of disease progression

Identify differentially expressed biomarkers in disease samples.
