

Infinity modular trolley for evaporation equipment

- Accommodates a wide range of Genevac evaporation equipment
- Minimises system footprint, freeing valuable bench or fume hood space
- Allows systems to be moved easily for service access
- Lower 'truck' rolls out for access for components below the bench
- Trolleys can be joined together, side-by-side

Infinity is a modular trolley, designed to accommodate a range of Genevac evaporation equipment in a number of configurations, to suit customer requirements. It minimises the footprint of the supported system, freeing valuable bench or fume hood space and allows the system to be moved easily for service access.

The Infinity Trolley easily accommodates an HT-6 or HT-12 Series 3 evaporator, pump and waste container. If required, trolleys can be joined together side-by-side, creating an HT-24 or HT-36.

Movable truck

For maintenance purposes, the lower shelf (truck) can be pulled out to allow access to items on the shelf, or to enable safe and easy movement of the whole system.

Truck fully retracted

- Front feet of Infinity trolley are lowered
- Trolley is secure for system use and cannot be moved

Truck fully extended

- Front feet of the Infinity trolley are lifted and unit can now be moved
- Extended truck provides the required stability for movement
- System must not be operated while truck is extended

Optional shelf kit

The Infinity shelf kit (Genevac part number: 70-1635) can be attached to the left or right-hand side of the trolley in one of three positions. It can accommodate a Scroll pump, or Inert Gas Purge box.
